Agenda

- If-Insurance introduction
- Constraints in the insurance industry
- Starting point
- Principles
- Building the platform
- Onboarding of teams

This is If

If in brief

SAMPO GROUP

Owned by Sampo plc, listed on
NASDAQ Helsinki

Head office: Stockholm, Sweden
CEO: Morten Thorsrud

Business areas

Private, Commercial, Industrial and Baltic

~7 300

Employees (FTE)

3,9 million

Customers

Market position

if... #1
Nordic

CUSTOMER EXPECTATIONS

Driving score is the #1 factor in Root pricing.

Root Insurance Co

Save up to **52%** on your car insurance, using Root's mobile app-based "try before you buy" PHYD

Driving digitalization through enabling technologies and innovation.....and platforms

If tech lab

- Building prototypes
- Supporting teams in scoping and implementing MVPs
- Exploring and evaluating new technologies
- Facilitating cross-organizational innovation

Cloud journey

- Established Cloud and DevOps CoE
- Utilizing Microsoft Azure Cloud
- Core platform for If's digitalization journey

Robotics and AI

- 22 concurrent processes
- RPA can use 17 different business applications in IF
- 100+ Business Analysts trained across Nordics
- Image recognition, speech to text analysis, chatbots etc.

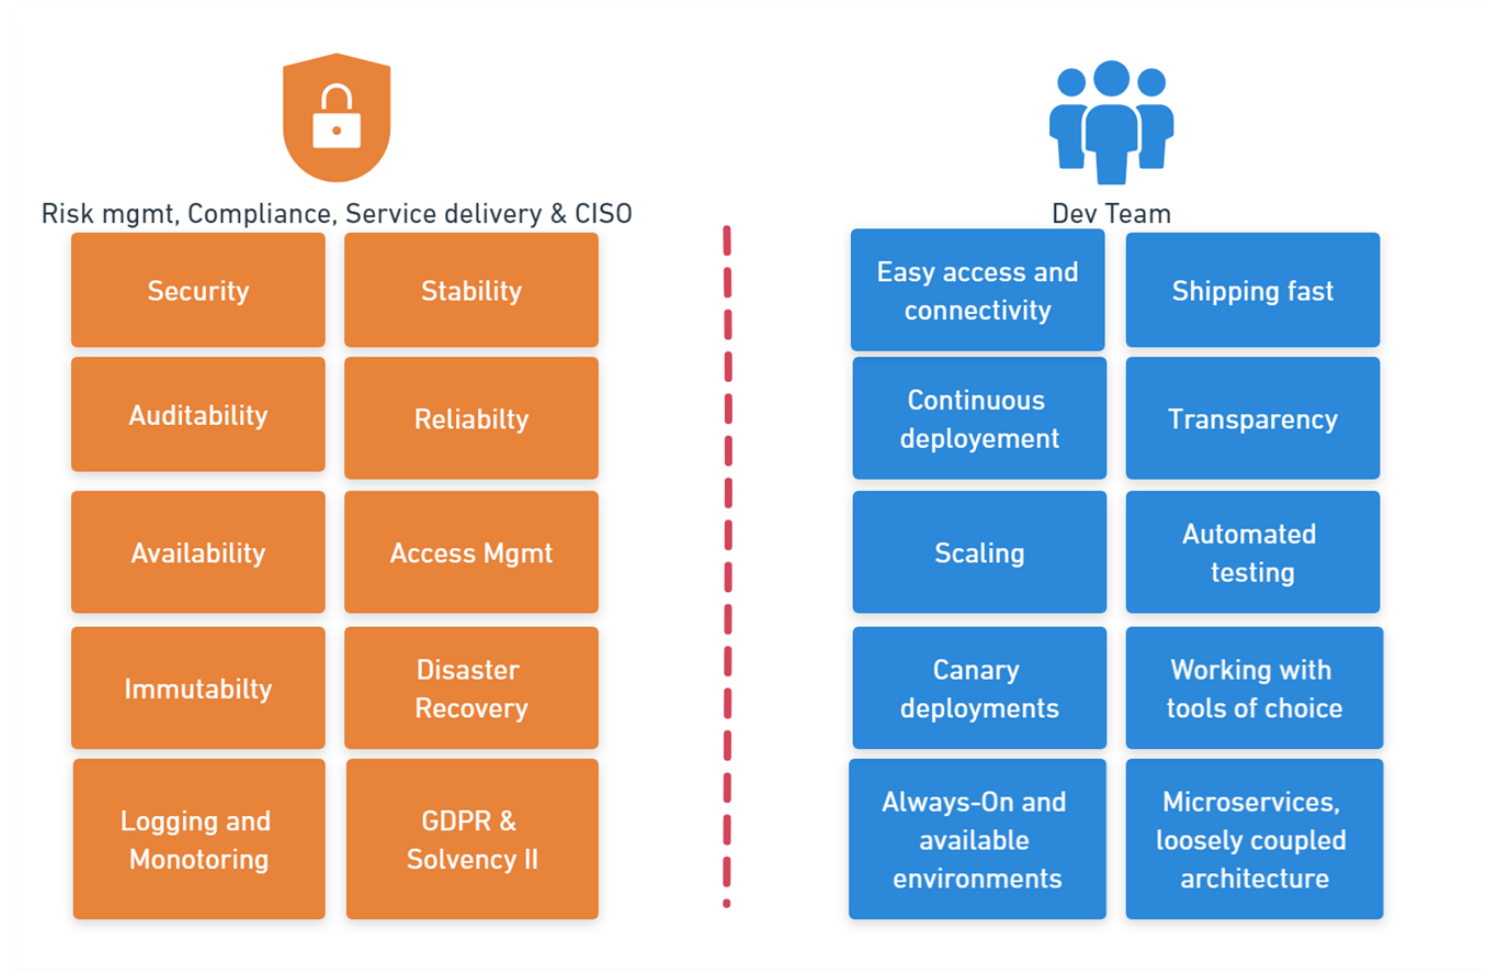

Decommissioning legacy

- Waypoint
- Transition to cloud
- Decoupled architecture

Constraints

Balancing act

Constraints

- Constraints in If Insurance
 - Concerns about networking and connectivity - solved by implementation together with network team using the hub/spoke model
 - Firewall – can we route all egress and ingress traffic via a central FW
 - Secure exposure (API & WAF capabilities) - connect cluster to central services being built by network team and digital solutions team
 - DMZ approach - Can it be done in some other way?
 - Https demands - Expose only https endpoints
 - Not expose cluster API to Internet - Private cluster
 - Container security – Scanning and policy implementations
 - Access to clusters – implement a division of concerns and integrate with identity provider
 - Shift left – can we introduce new ways and checks in build process for dev teams
- Starting point
 - Was to question many of the truths and anchor and find new solutions to old problems.

Audiability and tracability

- Build it into the developer flow
- Ease the auditing process
- Quickly be able to rollback

The starting point

The starting point

- Interviews
- Managing K8s takes a lot of work
- File->New->K8s does not cut it

The starting point

- On Prem connectivity?
- How many environments?
 - Why that many?
- AuthN/AuthZ
- Monitoring
- Event, Alarm and Incident handling
- Scaling
- Security
- ...

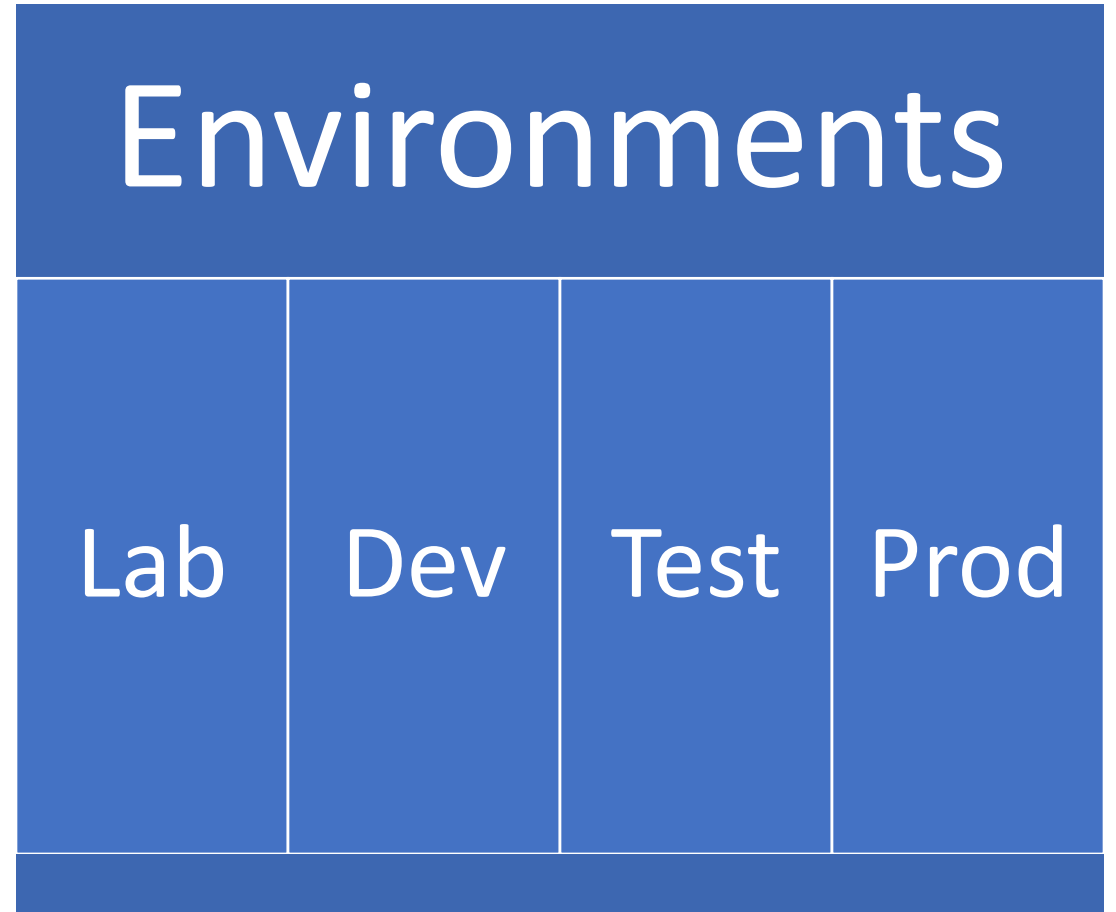

Black Hole

Do you want XYZ that will
increase security?

Environments

- Varied from team to team
- Common theme: many environments
- Focus on stabilization
- Friendly challenge

Guiding Principles

Principles

- Aspect Oriented Programming
- Hard to make mistakes
- Maintenance Cost > Development Cost
- Reduce complexity
- Ubiquitous language
- __ as Code
- Minimize developer friction

Building & managing the Platform

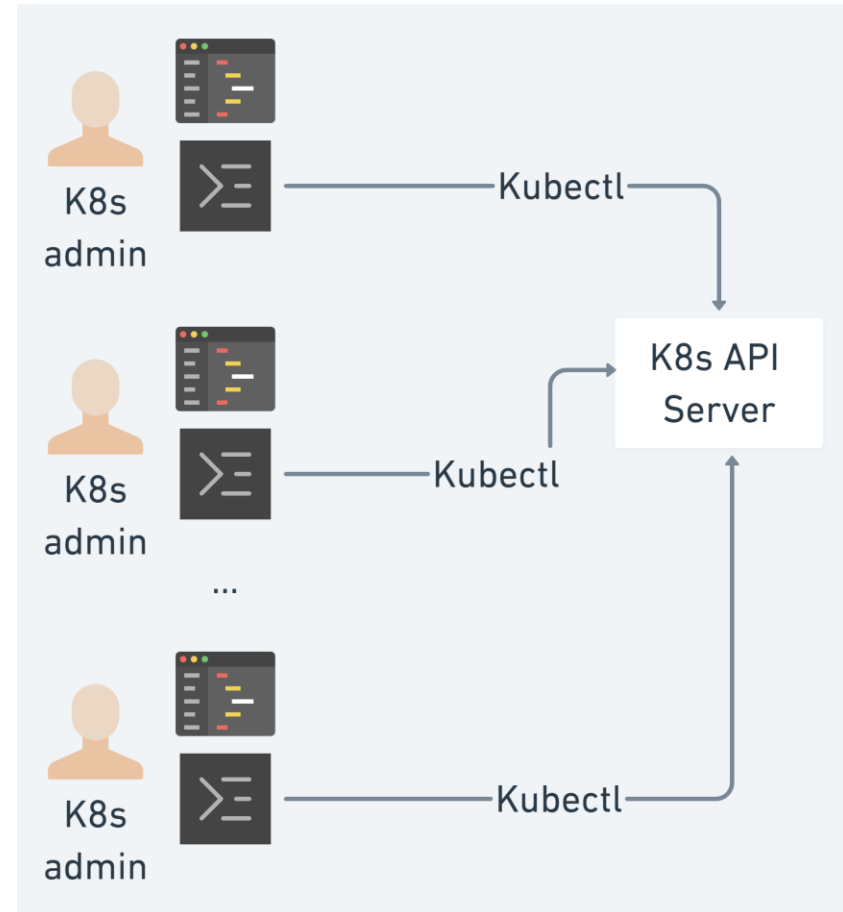

The problem of scale

- Number of people, platform team size
- # Clusters
- # Environments

The problem of scaling the team

- Race conditions on changes
- Disaster recovery scenario
 - New API servers in cloud environments
- No tooling to enforce QAs
- Difficult to get an overview over changes
- Missing audit trail

GitOps

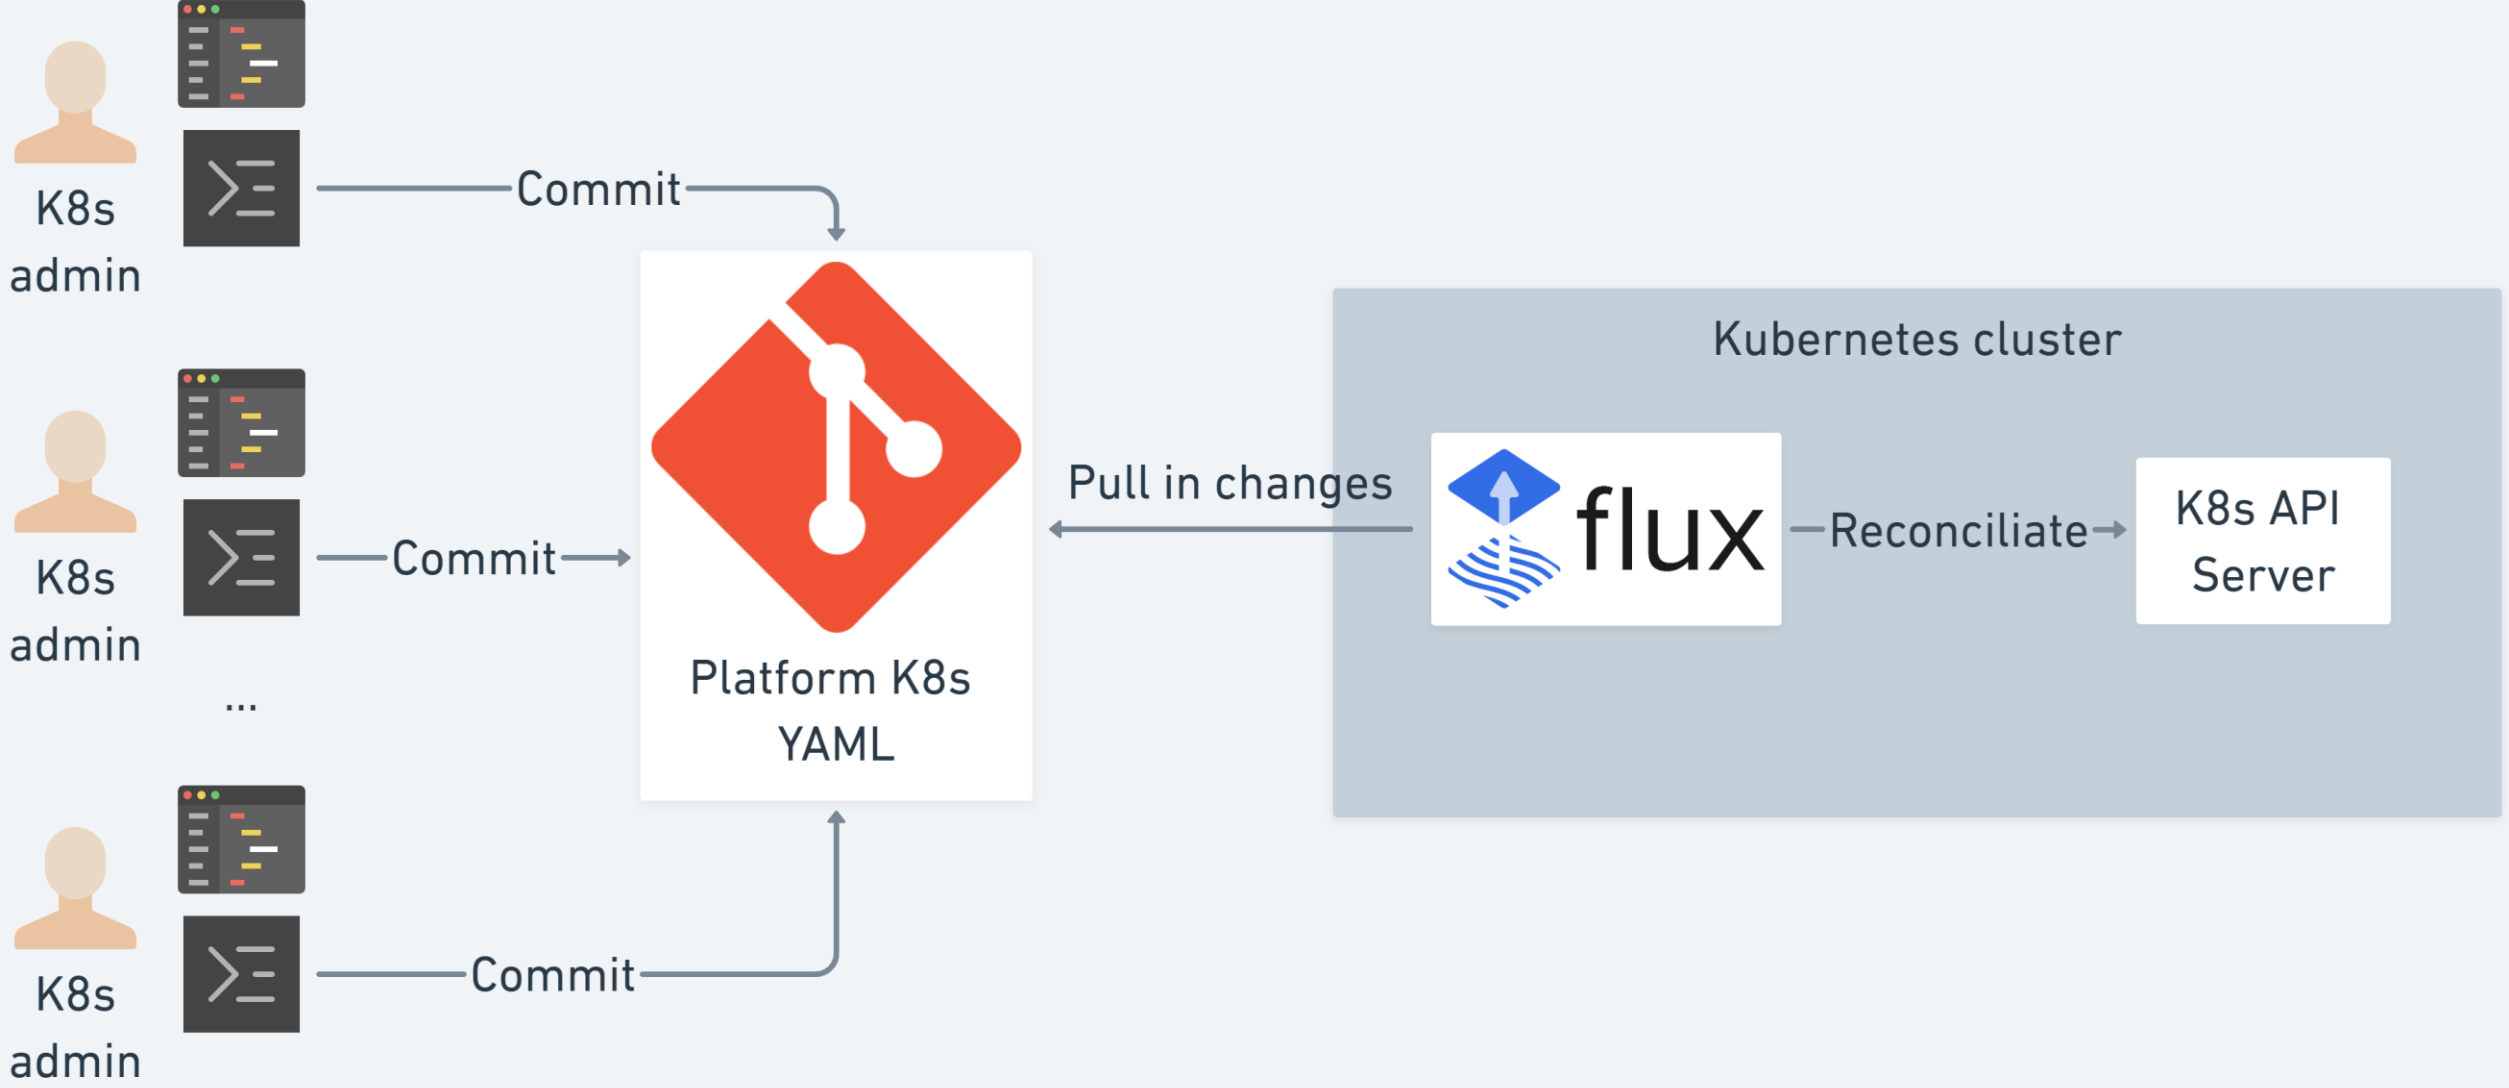

- Platform and teams
- An operating model
 - Push to Pull based model
 - Sharp separation between CI & CD
- Infrastructure vs Configuration

<K8s CRD>

Bootstrap

Disaster recovery

- Working all night story
- Train for it
- First training session \neq first live disaster

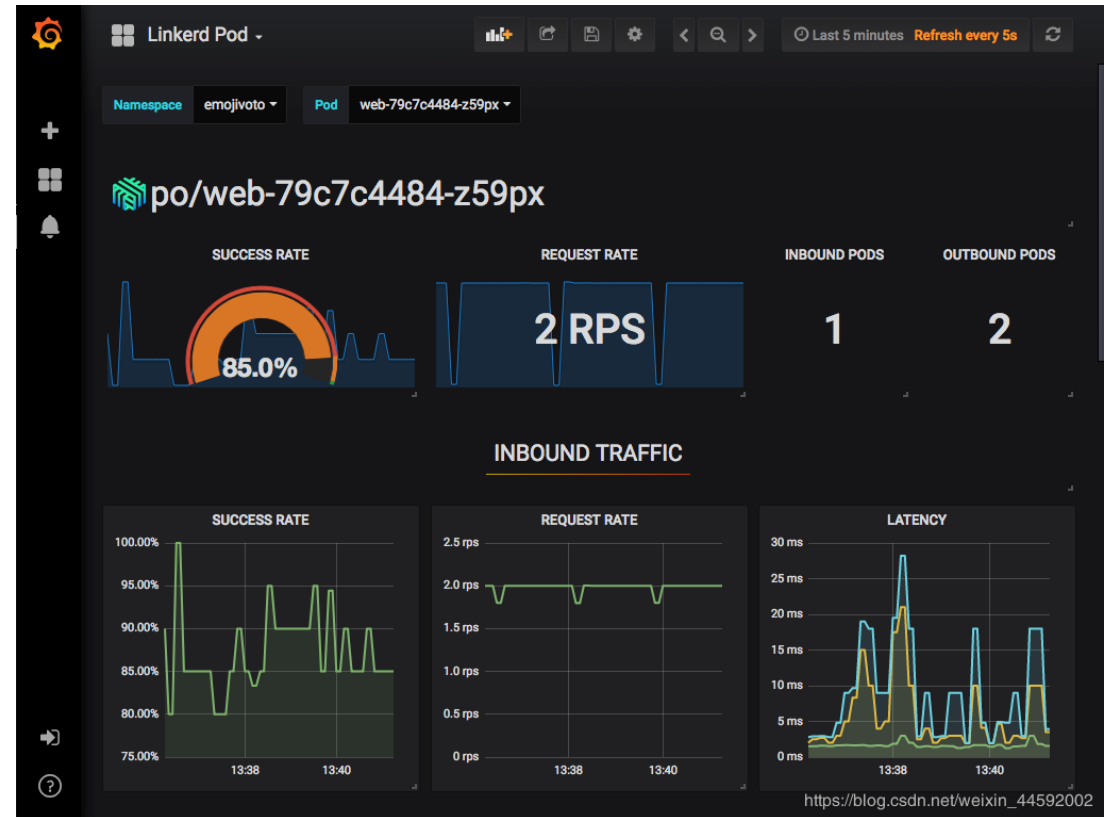

Service Mesh...really?

- Is K8s not complicated enough?
- We wanted to solve:
 - Network traffic encryption
 - Automatic insights
- Why did we choose Linkerd?

The biggest benefits

- Network insights
- Metrics
- Main source of alarms

Onboarding of teams

- Sharp separation between CI and CD
- Rethink monitoring, move towards metrics
- Rethink number of environments
- Scalability and disaster recovery
- Stateful vs stateless

QA
